

SHIVANGI MAURYA

Aspiring DevOps Engineer | DevOps Program Trainee

CAREER OBJECTIVE

Passionate B.Tech CSE student with hands-on experience in Linux, Docker, AWS EC2, CI/CD pipelines, and full-stack development. Seeking a DevOps internship or junior role to build and automate scalable infrastructure while contributing real-world engineering impact.

INTERNSHIP EXPERIENCE

DevOps Engineer Intern — mCarbon Tech Innovation

DevOps Program | Noida | June 2026 – July 2026

- Built a production-grade AI RAG chat system from scratch using Python/Flask, ChromaDB, sentence-transformers, and OpenRouter API, with multi-user auth, web search, and a ChatGPT-style UI.
- Hardened Kubernetes security on a full-stack Employee Management System — Guaranteed QoS, Pod Security Standards, PodDisruptionBudgets, init/sidecar containers, and lifecycle hooks.
- Set up GitOps pipeline (GitHub to Jenkins to Harbor to ArgoCD) with Helm charts managing all Kubernetes resources.
- Built a Helm chart covering core workload types (Deployment, StatefulSet, DaemonSet, Job, CronJob) with a full test case document.

TECHNICAL SKILLS

DevOps: Linux, Docker, Kubernetes, Jenkins, GitHub Actions, Terraform, ArgoCD, Helm, AWS (EC2, S3)

Cloud: AWS EC2 (Instance Launch, SSH, Linux), AWS S3, IAM Basics

Languages: Python, Bash, JavaScript, C++, HTML/CSS

Backend: Flask, Node.js, Django, REST APIs, MySQL, MongoDB, ChromaDB

Frontend: React.js, HTML5, CSS3, JavaScript (ES6+)

Tools: Git, GitHub, VS Code, Postman, npm

PROJECTS

AI RAG Chat System

Python · Flask · ChromaDB · Sentence-Transformers · OpenRouter API

- Built a production-grade multi-user RAG chatbot from scratch with authentication, profile settings, and a ChatGPT-style UI.
- Integrated ChromaDB vector store and sentence-transformer embeddings for context-aware retrieval, plus live web search.

Auto Log Archiver & Alerting System

Python · Docker · AWS S3 · EC2 · GitHub Actions

- Automated log compression, archival to AWS S3, and email/Slack alerting using Python and Bash scripts.
- Containerized the pipeline with Docker; deployed on AWS EC2 with SSH access.
- Built CI/CD pipeline via GitHub Actions for automated build, test, and deploy on every commit.
- Implemented log rotation policies to manage disk usage and reduce storage costs.

Employee Management System (EMS)

Flask · MySQL · Kubernetes · Docker · Helm · Jenkins · ArgoCD · Harbor

- Built and deployed a full-stack EMS on the company's Kubernetes server with GPS-geofenced attendance, real-time admin-employee chat, and a Chart.js analytics dashboard.
- Set up complete GitOps pipeline (GitHub to Jenkins to Harbor to ArgoCD) with Helm charts and Kubernetes security hardening.

SafeHer — Women Safety Web Application

HTML · CSS · JavaScript · Node.js

- Developed SOS alert system, live location sharing, and nearby help locator for women's safety.
- Vanilla HTML/CSS/JS frontend with Node.js REST API backend; mobile-responsive design.

Emotion-Based Music Recommendation System

Python · OpenCV · Machine Learning · Flask

- Facial emotion detection via OpenCV and ML; mapped detected moods to curated Spotify playlists.
- Flask web interface; trained classification model on labeled facial expression datasets.

CareNexus — Hospital-at-Home Platform (Startup Pitch)

PowerPoint · PDF · Strategy · Spark-O-Fest 1.0, Lucknow (March 2026)

- Co-developed startup pitch for Spark-O-Fest 1.0 Lucknow as vision and storytelling lead.

EDUCATION

B.Tech — Computer Science & Engineering | MGIMT, Lucknow

Currently in Final Year | Passing Year 2027 | Coursework: Operating Systems, Networks, DBMS, Data Structures, Algorithms

ACHIEVEMENTS & ACTIVITIES

- Animated GitHub profile README with CI/CD badges, DevOps skills, and live stats widgets.
- Python Learning Repository — structured README with documented practice problems and scripts.
- Developed full DevOps learning roadmap (dark-themed PNG flowchart) for DevOps program; Internshala Student Partner for campus tech outreach.
